DURABILITY SPECIFICATIONS

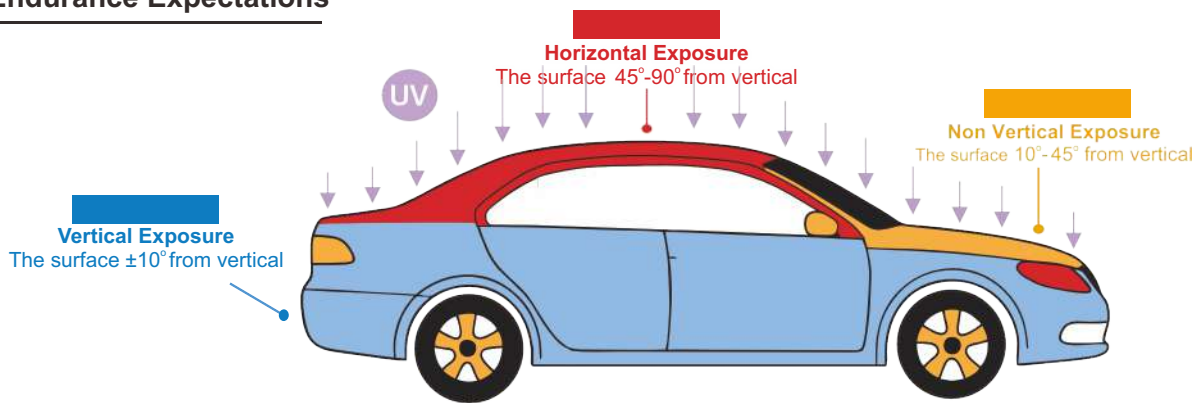

Introduction

In general, Maxdecal films are made using high quality materials that can provide color retention and the best appearance for 5 years of use. However, this durability may vary depending on factors such as weather conditions, environment, installation methods, and maintenance and usage. The following are some factors that can affect the duration of film use:

- Exposure to UV rays,
- Weather or climate changes,
- Surrounding environmental conditions,
- Film cleaning and maintenance methods

The information above indicates the durability of the film, where the film is still able to maintain its color and appearance in accordance with Maxdecal quality standards. Slow color changes due to natural exposure are part of the normal aging process and are not considered product defects. With proper care and installation in accordance with procedures, Maxdecal film can provide optimal results and remain attractive for a long period of time
